

Automated Assessment and Certification Compliance of Organisations, Systems, Data and AI Operations in a Human Understandable Context

PURPOSE:

ACCOMPLISH will prepare enterprises of any size for increased regulatory scrutiny by automating, simplifying, and integrating compliance for data and AI operations.

SOLUTION:

An AI-driven framework covering legal, environmental, cybersecurity, and industry-specific standards, whilst ensuring transparency, accountability, and a human-in-the-loop approach. The ACCOMPLISH solution will provide explanations on compliance requirements and results, as well as proactively alerting users about any potential risk to maintaining compliance or violations. Through the **Compliance Digital Passport**, static assessments will be transformed into **dynamic and up-to-date compliance proof**.

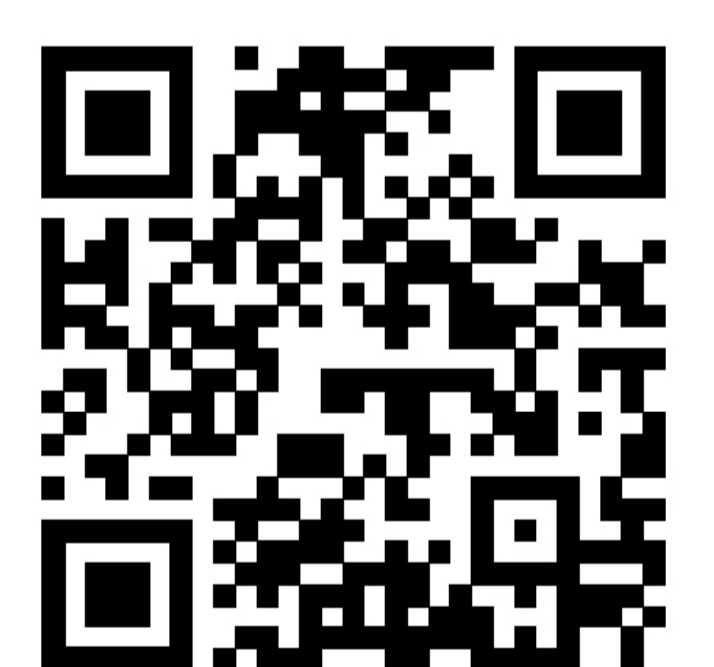

PILOTS for validation:

The project's innovations will be validated through real-world applications in **energy, automotive, manufacturing and aviation**.

IMPACT:

ACCOMPLISH will significantly **reduce the time, cost and complexity of achieving compliance for data and AI operations**. This will enable **faster innovation and more secure onboarding for all stakeholders**. It will **boost trust, improve data quality and AI trustworthiness** through continuous observability and bias elimination, and will **promote more sustainable operations**, all whilst making **compliant Data/AI Ops accessible for SMEs**.
